OF NURSERYMEN**

FOREWORD

It is good judgment to plant nursery stock obtained near home if possible. It is acclimatized and you know it will succeed under your conditions. Also being freshly dug it reaches your grounds in fresher condition and not only will a larger percentage grow, but it will grow more thriftily.

We have many plants not listed. Ask for what you want. Perhaps we have it, or can get it for you. Visitors are always welcome, but we do no business on Sundays. Correspondence as to your plants and planting problems invited. We don't know everything, but we are willing to help out as far as our knowledge goes.

RHODODENDRONS

Rhododendrons are a specialty with us and we try to grow all species and worthwhile hybrids that we think will prove hardy. All our species and hybrids of proven hardiness here are marked with an asterisk. While all the unmarked kinds have lived over two winters here, we give no guarantee as to their hardiness, but offer them for trial. We endeavor to obtain our seeds from reliable sources, and examine our seedlings closely to determine whether they are true to name, but beyond our being as careful as possible in this matter we assume no responsibility. Many of the newer Chinese species are so much alike that identification of small plants is a difficult matter. However they are all pretty, and any addition to the meager list of hardy rhododendrons generally offered will be quite an acquisition.
